WebDev student project assignment (version 1.3)

Mihai Andries, Issam Rebaï

11 February 2026

1 Group composition

The group project is to be done in groups of 6 people, working on the project tasks in three sub-groups of 2 people each.

2 Project description

The goal is to build an online news website. The website must provide the following functionalities:

- Use-case 1: **Account management**
  - Register as a new reporter.
  - Log in as a new reporter.
  - Update your personal information in your reporter account.
  - Delete your own reporter account (without deleting the articles you created).

    Functionalities covered: INSERT, READ, UPDATE, DELETE data
- Use-case 2: **News management**
  - Add a news report (without publishing it) containing: (a) news title, (b) news content (text-only), (c) news tags. The tags are to be selected from a list pre-defined by the administrator (e.g. education, science, health, culture, entertainment, sport, politics, weather, military).
  - Publish/Unpublish a news report (to comply with legal requests of taking down a news report).
  - Update a news report (for live coverage use-case).
  - Delete an unpublished news report.

    Functionalities covered: INSERT, READ, UPDATE, DELETE data
- Use-case 3: **News reading**

Home Page

  - Display the five latest news titles (headlines), which are linked to news reports.
  - Display the five latest news titles with a given news tag.
  - Display the five latest articles from a given news reporter.
  - Display a news report: title, name of the news reporter, date, tags, content.
  - Count number of visits per article.

    Functionalities covered: READ, UPDATE data

Read Page

- Use-case 4: **Administration and statistics**
  - View the list of reporters, with the ability to lock/unlock/remove their accounts.
  - Display the top-5 most read news reports, together with a graphic plot showing the number of readers for the top 5 most-read articles.
  - Display the top-5 news reporters, sorted according to the total number of views of their news reports. For these charts, you can use tools like D3.JS or ChartPHP.

    Functionalities covered: READ, UPDATE, DELETE data

Stats Page

3 Evaluation grid

- Conception (30%):
  - Website wireframe(15%)
  - Tree-structure linking the web pages (visual sitemap) (5%)
  - UML Class Diagram for the project (10%)
- Basic functionality (50%):
  - Required functionalities work without error in the nominal case (40%)
  - All pages and functionalities are correctly interlinked (via GET/POST) (5%)
  - Input sanitizing (to avoid errors in the non-nominal case) (5%)
- Security (20%):
  - Only registered users can access/call pages that require authentication. (10%)
  - Protection from SQL injection (5%)
  - Protection from XSS attack (5%)
- Bonus points (20%) for:
  - Appropriate presentation of information in terms of user experience (5%)
  - Appropriate user interface for user input (e.g., forms with highlighted fields to pinpoint missing information, error messages) (5%)
  - Responsiveness: website usable both on wide and narrow screens (5%)
  - Style: respect of a coherent common style sheet and web-page template (5%)

4 Submission

On the evaluation day:

- The project has to be accessible online to colleague students and teaching staff via a URL.
- The project code has to be uploaded to the Moodle before the specified deadline.
- The project code has to be uploaded to the IMT gitlab (`https://gitlab-df.imt-atlantique.fr/`).

For any questions, please refer to the author of this document at `firstname.lastname@imt-atlantique.fr`.
